

POTENTIOMETRIC SURFACE MAP OF THE UNCONSOLIDATED AQUIFERS OF WABASH COUNTY, INDIANA

Wabash County, Indiana is located in the north-central portion of the state with all of the areal extent of the county situated within the Upper Wabash River Basin.

The mapped potentiometric surface (PSM) contour elevations represent lines of equal elevation relative to the measured groundwater levels in wells. In general, wells completed in a confined aquifer system are bound by impermeable layers and will have static water levels under hydrostatic pressure causing the water level to rise above the elevation of the aquifer resource. In contrast, an unconfined aquifer system is not bound by impermeable layers; therefore, the water level will not be under hydrostatic pressure and will not rise above the aquifer resource. Static water level measurements in individual wells used to construct the potentiometric surface map are indicative of the water level at the time of well completion. Therefore, current site specific conditions may differ due to local or seasonal variations in measured static water levels.

Coordinate locations of water well records were physically obtained in the field, determined through address geocoding, or reported on water well records. Elevation data were either obtained from topographic maps or a digital elevation model (DEM). Elevation and location quality control/assurance procedures were utilized to refine or remove data where errors were readily apparent.

In Wabash County well depths 100 feet or less were a priority in mapping the potentiometric surface. However, portions of Wabash County are lacking in data and/or are covered by deposits that have limited to non-existent aquifer potential. Therefore, potentiometric surface elevations contours have not been extended through these areas. There are approximately 535 unconsolidated water well records in the county located that are within the priority depth range.

Potentiometric surface elevations range from a high of 850 feet mean sea level (msl) in the northwest corner of the county, to a low of 640 feet msl in the west-central part of the county along the Wabash River. Generalized groundwater flow direction for Wabash County is towards major drainage relevant to the basin. Therefore, in the Upper Wabash River Basin, groundwater flow is towards the Wabash River and its major tributaries. These include the Eel River to the north, the Salamonie River in the east-central part of the county, and the Mississinewa River to the south.

Hillshade Map of Wabash County, Indiana

EXPLANATION

- Line of equal elevation, in feet above mean sea level
- Potentiometric Contour interval 10 feet
- Stream
- County Road
- State Road
- US Highway
- Municipal Boundary
- State Managed Property
- Lake & River
- No Aquifer Material or Limited Data

Map Use and Disclaimer Statement

We request that the following agency be acknowledged in products derived from this map: Indiana Department of Natural Resources, Division of Water. This map was compiled by staff of the Indiana Department of Natural Resources, Division of Water using data believed to be reasonably accurate. However, a degree of error is inherent in all maps. This product is distributed "as is" without warranties of any kind, either expressed or implied. This map is intended for use only at the published scale.

This map was created from several existing shapefiles. Township and Range Lines of Indiana (line shapefile, 20020621), Land Survey Lines of Indiana (polygon shapefile, 20020621), and County Boundaries of Indiana (polygon shapefile, 20020621), were all from the Indiana Geological Survey and based on a 1:24,000 scale. Draft road shapefiles, System1 and System2 (line shapefiles, 2003), were from the Indiana Department of Transportation and based on a 1:100,000 scale. Hydrography, Streams (NHD) (line shapefile, 20021000) was from the U.S. Census Bureau and based on a 1:100,000 scale. Hydrography, Rivers (NHD) (line shapefile, 20081218), Rivers (NHD) (polygon shapefile, 20081218), Lakes (NHD) (line shapefile, 20081218), Lakes (NHD) (polygon shapefile, 20081218) were from the U.S. Geological Survey and the U.S. Environmental Protection Agency, and based on a 1:24,000 scale. Managed Lands (DNR) (polygon shapefile, 20100920) was from the Indiana Department of Natural Resources and based on a 1:24,000 scale. No Aquifer Material or Limited Data Wabash County, Indiana (Polygon shapefile, Maier, 2013). Digital Elevation Model image is derived from the Indiana OrthoLiDAR Statewide Collection Program (2011). Potentiometric Surface Map of the Unconsolidated Aquifers of Wabash County, Indiana (line shapefile, Maier, 2013) was based on a 1:24,000 scale.
