

# Full Service and Screening Sexually Transmitted Disease Clinics

The clinics listed below are agencies that partner with the Indiana State Department of Health STD Prevention Program. Each clinic is defined as operating at one of two levels of service: full and screening.

Full service clinics have clinicians available on site to perform both male and female exams at all times, provide treatment for diagnosed STDs at the facility, and offer testing for at least one of the following: syphilis, bacterial vaginosis, trichomoniasis, and herpes. Full service clinics may also offer additional services such as hepatitis testing, HPV vaccinations, etc. They typically do not have restrictions on patients that can be seen at the clinic (county of residence, sex, etc.)

Screening clinics may or may not meet the criteria listed above. For example, a screening clinic could offer testing on site but not treatment. They may also restrict services based on county of residence or sex.

For specific information about services offered, please contact the clinic closest to you.
